SEF TOURAINE

With 25 years of experience in the manufacturing of special machines, we are recognized by our clients for our expertise in traceability.
We are known in the Pharmaceutical market since 2006 with our first traceability modules and then, with the implementation of the CIP13 in 2009. We have built more than 50 machines which are still running in our clients' production lines.

In order to meet the last FMD European Regulations about serialization of medicines, we have built a new pharmaceutical module with serialization and Tamper Evident process.

This serialization module designed by "SEF Touraine" offers an ergonomic and compact solution for marking, datamatrix checking, tamper evident label application and ejection of non-conform packs.
Our modular concept allows the integration of different marking and vision systems. As well, the open automation architecture enables the use of different serialization softwares.

Get SERILAB and choose your :

- serialization solution
- tamper evident
- serialization software
- marking module
- vision system
